

Map of Border Deaths

Marijana Hameršak

This map symbolically represents places of **border deaths** along the **Balkan migratory trail** following the final closure of the **Balkan corridor** in 2016. The map is based on ethnographic and archival research conducted within the ERIM research project and data published in the 4D database.

Locations of graves along the trail are marked on a separate layer and encompass a longer period (1973-2024).

The database and this map are works in progress and, as such, only partially represent the mortality path of the Balkan migratory trail.
